How to match Beltone hearing aids with the correct charger

Each charger type is offered with different inserts – known as the charging form factor (CFF) – which relate to a specific Beltone hearing aid collection or style.

The CFF is indicated with a number and is shown inside the charger and on the charger packaging.

CFF numbers 01 and 04 are not visible on the packaging just yet – you can see the number inside the charger.

How to tell if the hearing aids are charging

Place the hearing aids in the charger and let the lights indicator on the hearing aids guide you. It is the same process whichever charger is used.

You know that charging has started when the hearing aid lights blink slowly.

When fully charged, the hearing aid lights remain constant, not blinking.

The lights turn off when the hearing aids are removed from the charger.

Premium charger illustrated.
For more information, please see the individual user guide for each charger.
